

## Black-and-White or colourful?

The well known and well liked Sample Vials are used for storing samples of any kind. Thanks to our own production and a large order, we have been able to further develop this product line and concept.

So far our Sample Vial line followed American practice and standards. However, in Europe, metric measurements instead of ounces are in use and packaging is by the hundred rather than by the dozen. There were also frequent requests for colour coded caps but unfortunately we were not able to provide caps in reasonably small quantities.

Thanks to our own production, we have now invested in the necessary tools and forms and are therefore able to offer the first "sample vial family" with a diameter of 27 mm and volumes of 10, 15, 20 and 25 ml. The solid screw caps are available in 6 different colours and have a PTFE liner to keep your sample in an inert environment. Packed in high quality cardboard boxes for 100 vials, the vials are separated by a grid divider which keeps them from knocking together.

Order some samples of these storage vials or profit from our "Sample Kit" G075X-27Kit25-D and always have the proper vial at your disposal.
