Bring Creativity into your Day...

Our Storage Vials are used all over the world; with volumes from 1 to 60 ml, they are available long and thin or short and fat and of course the well-proportioned middle is also available. The Storage Vials are closed with coloured PTFE lined screw caps.

Try some fun stuff with our «CapPic Creator» and create your own picture with the six different cap colours. For Christmas a Christmas Tree, for 1. August a Swiss Cross and for Retirement a 65. There is many an idea. Try our «Cap Creator» and send us your best creation. The 10 best creations will win a chemoline voucher with a value from 20CHF to 100CHF.

We calculated that there are approximately 1.5^{77} possible creations. However the combinatorics lessons are long past, the first to send in the exact result will also receive a voucher.

Another possibility is - and we do this ourselves for exhibitions - fill the vials with some good stuff for a fun party surprise or the ultimate present.

However, of course you can also order our Storage Vials with one single cap colour. They are practical containers for reference samples, solvents or for all small volume samples which need to be stored, sent or tested.

Have fun!
